• Energy-saving efficiency proven by research • Easy to install • A rewarded product

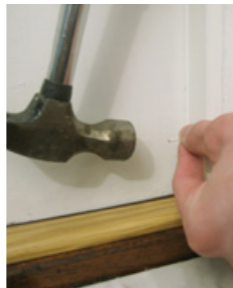

Binja Sealing List

Save energy and increase the comfort of your home or office – easily!

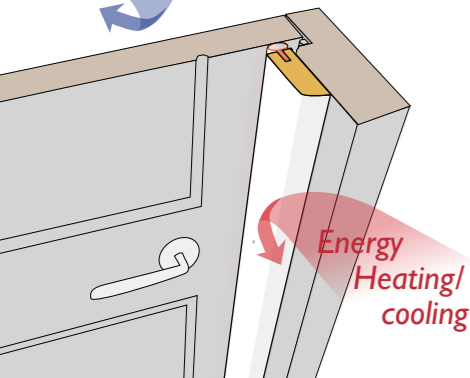

It has been calculated that the total amount of energy wasted due to lost heat in Finland equals the annual production of a nuclear power plant. In addition to lost heat, poorly sealed doors may cause draught and let in noise, odours and air impurities. Poorly sealed doors are, in fact, a common problem, and traditional sealing tapes often provide an insufficient solution. Sometimes the problem is caused by old and worn-out thresholds and door hinges, sometimes by the poor construction of new doors, which are all expensive to repair. However, such problems are fixed easily and affordably with Binja Sealing Lists.

A reliable and easy way to seal!

The Binja Sealing List is installed to the door frame so that the seal is firmly pressed against the door tightly closing even larger gaps. It is that easy. The installation does not require professional knowledge or skills – anyone can do it. There is no more air leakage, your heating and cooling costs are reduced and your house is more comfortable. A brilliant idea that has received the Finnish Innovation Award!

Draught
Odours
Noise
Dust

Suitable for all kinds of doors!

The Binja Sealing List can be used to seal all kinds of doors, whether old or new, in all kinds of buildings, whether residential or commercial. The sealing list has been proven to efficiently prevent air leakage as well as to provide insulation against odours, dust and noise from outdoors.

Outer doors

Hall doors

Inner doors

Terrace doors

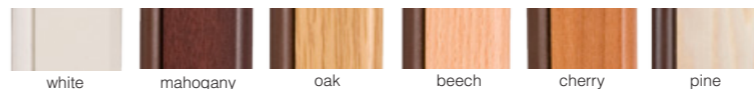

Balcony doors

Even for windows!

Fitting lists in one package!

The Binja Sealing Lists are available in white, red and blue as well as in a variety of wood patterns. The complete sealing-list set includes the lists for the door frames and the threshold. The sealing lists for doors are available in two sizes, depending on door height. The threshold list is made of MDF profile. Alternatively, you can choose a hard-oak list for the threshold if it is under heavy use. The threshold lists are available in several sizes that fit most doorways. In addition, we have protective metal lists that can be used to cover the wooden list. The Binja Sealing Lists are also available for windows.

+ now also
in blue and red!

Benefits

- Savings in energy costs: in sub-zero temperatures, the effect on inside temperature up to three degrees C = save up to 15 % in heating costs!
- Very efficient noise insulation
- In apartment buildings, insulates both noise and odours coming from common areas
- No more doors banging against the doorframes – no more draught in the apartment!
- Improved living conditions
- The sealing of both old and new doors and windows is easy, reliable and INEXPENSIVE!
- An elegant and durable result!
